### Import Tariffs

In practice, Thai Customs officers use a c.i.f. (cost, insurance and freight) formula for calculating the import duty. Most duties are ad valorem, although more than one-third are specific duties, which is based on unit, volume, or weight. When the tariff lists both an ad valorem and a specific duty rate for an item, the rate yielding the higher revenue applies. A special duty of \$10 is then added on to the calculated amount.
